Make analytical results more effective

MODERN MISSILE GUIDANCE

Includes software programs designed by the author

RAFAEL T. YANUSHEVSKY

Research & Technology Consulting, Bethesda, Maryland, USA

An innovative presentation of the theoretical aspects of modern missile guidance

Written by an expert with more than 30 years of experience, **Modern Missile Guidance** contains new analytical results, obtained by the author, that can be used for analysis and design of missile guidance and control systems. This book covers not just new methods nor is it merely a compilation of older methods, although it includes both. The book discusses, in a logical progression, with its clear elucidation of the guidance laws, the entire field from missile dynamics to modeling and testing missile guidance and control systems.

In contrast to existing books that discuss very simple and often unrealistic guidance system models, this book presents missile guidance models that describe more precisely the dynamics of the missile flight control system, making analytical results more effective in practice. The analysis of missile guidance system models in the time-domain and in the frequency-domain allows the generation of different guidance laws that supplement each other.

Taking modern, rigorous approach that leads to improved performance in missile guidance applications, the book examines new guidance laws, and corresponding algorithms for generating and testing these laws, and includes effective new software programs developed by the author. The author provides an innovative presentation of the theoretical aspects of modern missile guidance that quite possibly cannot be found in any other book. It delineates new ideas that, once crystallized, will significantly improve missile systems performance.

Catalog no. 62263, September 2007, 240 pp.
ISBN: 978-1-42006-226-7, \$159.95 / £92.00

FEATURES

- Describes a new class of guidance laws implementing parallel navigation based on the Lyapunov approach
- Covers the frequency approach to missile guidance analysis and design
- Analyzes guidance law performance under stochastic inputs
- Elucidates a new approach that can be used for integrated missile guidance and control system design as a modernization of the existing missile systems
- Reviews computational programs that can be used to test missile guidance laws
- Includes practical software programs that utilize new algorithms based on the frequency approach

CONTENTS

**Each Chapter contains an Introduction and References*

BASICS OF MISSILE GUIDANCE

Guidance Process
Missile Guidance
Representation of Motion
Line-of-Sight

PARALLEL NAVIGATION

Proportional Navigation. Planar Engagement
Proportional Navigation. Three-dimensional Engagement
Augmented Proportional Navigation
Proportional Navigation as a Control Problem
Augmented Proportional Navigation as a Control Problem
When is the PN Law Optimal?

ANALYSIS OF PROPORTIONAL NAVIGATION GUIDED MISSILE SYSTEMS IN THE TIME DOMAIN

Inertialess PN Guidance System
Method of Adjoints

CRC Press
Taylor & Francis Group

See reverse side for continuation of Contents and ordering information

CONTINUATION OF CONTENTS

ANALYSIS OF PROPORTIONAL NAVIGATION GUIDED MISSILE SYSTEMS IN THE FREQUENCY DOMAIN

Adjoint Method: Generalized Model
Frequency Domain Analysis
Steady-State Miss Analysis
Weave Maneuver Analysis
Example
Frequency Analysis and Miss Step Response
Bounded Input-Bounded Output Stability
Frequency Response of the Generalized Missile Guidance Model

DESIGN OF GUIDANCE LAWS IMPLEMENTING PARALLEL NAVIGATION: TIME-DOMAIN APPROACH

Guidance Correction Controls
Lyapunov Approach to Control Law Design
Modified Linear Planar Model of Engagement
General Planar Case
Three-Dimensional Engagement Model
Generalized Guidance Laws
Examples

DESIGN OF GUIDANCE LAWS IMPLEMENTING PARALLEL NAVIGATION: FREQUENCY-DOMAIN APPROACH

Neoclassical Missile Guidance
Pseudoclassical Missile Guidance
Example Systems

GUIDANCE LAW PERFORMANCE ANALYSIS UNDER STOCHASTIC INPUTS

Brief Discussion of Stochastic Processes
Random Target Maneuvers
Analysis of Influence of Noises on Miss Distance
Effect of Random Target Maneuvers on Miss Distance
Computational Aspects
Examples
Filtering

TESTING GUIDANCE LAWS PERFORMANCE

Forces Acting on Missiles
Missile Dynamics
Autopilot and Actuator Models
Reference Systems and Transformations

Seeker Model
Filtering and Estimation
Kappa Guidance
Simulation Models

INTEGRATED MISSILE DESIGN

Integrated Control and Guidance Missile Model
Synthesis of Control Laws
Integration and Decomposition

MISSILE GUIDANCE SOFTWARE

Software for Frequency-Domain Approach
Software for Time-Domain Methods

Glossary

Appendix A

Lyapunov Method
Bellman-Lyapunov Approach

Appendix B

Laplace Transform
Proof of Theorem

Appendix C

Aerodynamic Regression Models

Appendix D

Runge-Kutta Method

Innovations in Theory and Modeling

Guidance of Unmanned Aerial Vehicles

Rafael Yanushevsky

Research & Technology Consulting, Bethesda, Maryland, USA

Written by an expert with more than 30 years of experience, **Guidance of Unmanned Aerial Vehicles** contains new analytical results, taken from the author's research, which can be used for analysis and design of unmanned aerial vehicles guidance and control systems. This book progresses from a clear elucidation of guidance laws and unmanned aerial vehicle dynamics to the modeling of their guidance and control systems.

Special attention is paid to guidance of autonomous UAVs, which differs from traditional missile guidance. The author explains UAV applications, contrasting them to a missile's limited ability (or inability) to control axial acceleration. The discussion of guidance laws for UAVs presents a generalization of missile guidance laws developed by the author. The computational algorithms behind these laws are tested in three applications—for the surveillance problem, the refueling problem, and for the motion control of a swarm of UAVs. The procedure of choosing and testing the guidance laws is also considered in an example of future generation of airborne interceptors launched from UAVs.

The author provides an innovative presentation of the theoretical aspects of unmanned aerial vehicles' guidance that cannot be found in any other book. It presents new ideas that, once crystallized, can be implemented in the new generation of unmanned aerial systems.

Catalog no. K12322, March 2011, 376 pp.
ISBN: 978-1-4398-5095-4, \$179.95 / £114.00

FEATURES

- Provides a comparative analysis of new guidance laws as well as established guidance laws
- Focuses on computational algorithms and software usage in missile and UAV guidance
- Includes many numerical and MATLAB® examples
- Presents a rigorous theoretical presentation of guidance laws

CONTENTS

Basics of Guidance

Guidance Process
Missile Guidance
Guidance of Cruise Missiles and UAVs
Representation of Motion
Line-of-Sight
Longitudinal and Lateral Motions

Control of Lateral Motion

Parallel Navigation
Proportional Navigation: Planar Engagement
Proportional Navigation: Three-Dimensional Engagement
Augmented Proportional Navigation
Proportional Navigation as a Control Problem
Augmented Proportional Navigation as a Control Problem
When Is the PN law Optimal?

Control of Longitudinal and Lateral Motions

Aircraft Propulsion and Gas Turbine Engines

Ahmed F. El-Sayed

ZAGAZIG UNIVERSITY, CAIRO, EGYPT

This authoritative analysis of airbreathing and non-airbreathing engines devotes entire chapters to particular engine types, such as ramjet, pulsejet, and turbofan. Using actual case studies, this book illustrates engine performance under various operating conditions. Its comprehensive analysis of hypersonic engines makes this a one-of-a-kind reference and invaluable to students and professionals working in civil and military engineering, mechanics, and aeronautics.

Ballistics Theory and Design of Guns and Ammunition

Donald E. Carlucci

U.S. ARMY PICATINNY ARSENAL,
DOVER, NEW JERSEY, USA

Sidney S. Jacobson

RETIRED, CHESTER, NEW JERSEY, USA

This book offers unified coverage of interior, exterior, and terminal ballistics, a seamless presentation of the complex phenomena that occurs during the launch, flight, and impact of a projectile. The authors also emphasize practical design aspects, sharing insight that encourages superior design and progressive applications in the field.

Introduction to Rocket Science and Engineering

Travis S. Taylor

U.S. ARMY SPACE AND MISSILE
DEFENSE COMMAND,
HUNTSVILLE, ALABAMA

This text presents a unique perspective on the overall process of performing rocket science and becoming a rocket scientist starting at basic levels. It discusses the history of rocket science, explains how to build, test, and fly a rocket, and elucidates the general rules and basic physics behind the design of a rocket engine. The text also includes many real-world examples.
